

Fuel Economy Tips

1. Shift your truck between 1200 and 1400 RPMs. Taking the engine to the governor (1500) for every gear wastes fuel and gains you nothing in road speed.

2. Shut your truck off every chance you get. Conventional wisdom says you SAVE about a gallon per hour for every hour you don't idle. That converts to fuel mileage towards your bonus payout and your bonus speed. Switching the key to the "OFF" position is by far the easiest way to pump up your fuel mileage.

3. Keep your truck at the speed limit. Running at or slightly below the posted speed limit helps to ensure distance between vehicles and improve fuel efficiency. It SAVES more fuel than time and reduces stress.

4. NEVER IDLE when parked or waiting for a client. Use your bunk heater. Used the smart park on your truck.

5. Never coast downhill out of gear (foot on clutch or shifter out of gear).

6. Keep your distance between vehicles to avoid harsh braking.

7. Take your break within every 8 hour period and avoid D.O.T. infractions.

8. MAKE SURE YOUR LOG BOOK IS UP TO DATE. And inspect your truck before your trip, and fill up the inspection book
